

Supplementary Table 4. The simple effect of a subtype of childhood trauma on depressive level, controlling for other subtypes of childhood trauma, sex, and age

Model	Path	Level of rumination	Estimate	SE	t	95% CI
M1	Emotional abuse – perceived stress – depressive level	High	0.02	0.02	1.47	-0.01–0.05
		Low	0.05	0.02	3.25	0.02–0.09
	Emotional abuse – depressive level	High	0.10	0.02	5.37	0.07–0.14
		Low	0.06	0.02	3.36	0.02–0.09
M2	Physical abuse –perceived stress – depressive level	High	-0.03	0.02	-1.69	-0.06–0.01
		Low	0.05	0.02	2.05	0.01–0.09
	Physical abuse – depressive level	High	0.12	0.03	3.44	0.05–0.18
		Low	0.04	0.04	0.95	-0.04–0.13
M3	Sexual abuse –perceived stress – depressive level	High	-0.07	0.02	-3.94	-0.10– -0.03
		Low	-0.05	0.02	-2.22	-0.10– -0.01
	Sexual abuse – depressive level	High	0.08	0.03	2.50	0.02–0.14
		Low	0.01	0.02	0.55	-0.03–0.05
M4	Emotional neglect –perceived stress – depressive level	High	0.01	0.01	0.28	-0.02–0.03
		Low	0.04	0.01	3.45	0.02–0.06
	Emotional neglect – depressive level	High	0.06	0.02	4.24	0.04–0.09
		Low	0.02	0.01	1.87	-0.01–0.05
M5	Physical neglect –perceived stress – depressive level	High	0.01	0.01	0.21	-0.02–0.03
		Low	0.04	0.02	2.65	0.01–0.08
	Physical neglect – depressive level	High	0.11	0.02	4.78	0.07–0.16
		Low	0.03	0.02	1.79	-0.01–0.07

Estimate, unstandardized regression coefficient. SE, standard error; t, value of t-distribution; CI, confidence interval
