

Supplementary Materials

To compensate normal distribution issue, we conducted additional analyses using transformed data using natural logarithm. One point was added to the BDI scores before taking the log since several subjects remarked zero point in the BDI questionnaire. Skewness (S) and kurtosis (K) of transformed data were described below.

Emotional abuse: 1.7 (S) and 3.3 (K); Emotional neglect: 0.4 (S) and -0.6 (K); Sexual abuse: 4.5 (S) and 22.3 (K); Physical abuse: 2.0 (S) and 4.6 (K); Physical neglect: 0.6 (S) and -0.9 (K); BDI: -0.2 (S) and -0.9 (K).
