

Supplementary Figure 1. The mediating effect of resilience on the relationship between previous abuse experiences and current depressive symptoms. (A) Natural logarithm transformed data were applied except CD-RISC. The changed values after controlling for gender were described within the bracket. Indirect effects of resilience on depressive symptoms were significant in both physical abuse in male (B) and emotional abuse in female (C). Total scores of CD-RISC and BDI are used for resilience and depressive symptoms, respectively. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$. CD-RISC: Connor-Davidson Resilience Scale, BDI: Beck Depression Inventory.
