

Supplementary Figure 1. Edge-weight accuracy for anxiety-depression-addiction-sleep disorder symptoms network in SMA group (N=713) (A), IGD group (N=789) (B), and control group (N=5,744) (C). Bootstrapped confidence intervals of estimated edge-weights for the estimated network. The red line indicates the sample values, and the gray area indicates the bootstrapped confidence intervals. Each horizontal line represents one edge of the network, ordered from the edge with the highest edge-weight to the edge with the lowest edge-weight. SMA, Social Media Addiction; IGD, Internet Gaming Addiction.
