

Supplementary Figure 2. Node strength centrality difference test for anxiety-depression-addiction-sleep disorder symptoms network in SMA group (A), IGD group (B), and control group (C). The gray box represents nodes or edges that do not differ significantly from one-another, the black box represents nodes or edges that do differ significantly from one-another, and the white box in the centrality plot shows the value of node strength. SMA, Social Media Addiction; IGD, Internet Gaming Addiction.
