

**Supplementary Figure 1.** The proportion of response rates by group regarding withdrawal of home ventilator at 3 months under three scenarios. When an advance directive has been written (A), when intentions about LST were verbally expressed (B), when intentions regarding LST were unknown (C). Bars refer to percentages of respondents who chose “able to withdraw home ventilator” (solid square) and “unable to withdraw home ventilator” (dotted square). Able to withdraw: positive attitude towards withdrawal home ventilator at 3 months. Unable to withdraw: negative attitude towards withdrawal home ventilator at 3 months. LST, life-sustaining treatment.
